Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 11/04/2022 TO 18:00HRS Tue 12/04/2022

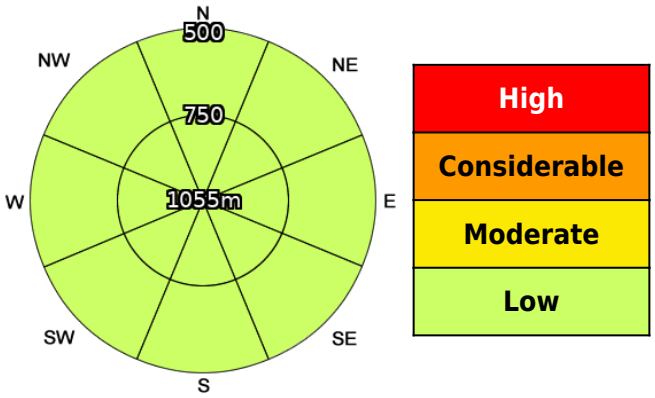

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 12/04/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to thaw and diminish at all levels. Stability will be good. Greatest snow cover will be on North through East to South aspects above 700 metres. Becoming increasingly patchy at lower elevations. Any new snow on the highest summits overnight will be superficial. The avalanche hazard will be Low.

Forecast Weather Influences

Some very light showers at the start of the night may be snow on the highest summits. This will clear to give a dry morning followed by rain at levels during the afternoon. East-South-East winds will be strong overnight easing to moderate by morning and becoming light by the end of the day. The freezing level will be above the summits.

Comments

Remaining mild for the next few days.
