

THE AVALANCHE HAZARD WILL BE LOW**Avalanche Hazard Forecast for Wednesday 13/04/2022****Avalanche Problems****Cornices****Forecast Snow Stability & Avalanche Hazard**

Mild and damp conditions overnight will maintain a soft and moist snowpack. General snowpack stability will be good in most areas. Localised surface instabilities will exist in summit gully exits and around corrie rims but these areas are not expected to be deep or extensive and should in the main be avoidable. Remaining cornices will be prone to collapse. The avalanche hazard will be Low.

**Forecast Weather Influences**

Rain will affect all levels overnight becoming largely dry with mist or fog through the day. The freezing level will remain well above the summits. Winds will be generally Westerly moderate to fresh.

Comments

Mild and moist conditions will maintain a slow thaw at all levels. The snowpack will be soft and moist in most areas. Remaining cornices will be prone to collapse. Rockfall will remain a possibility.
