

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 13/04/2022

Avalanche Problems

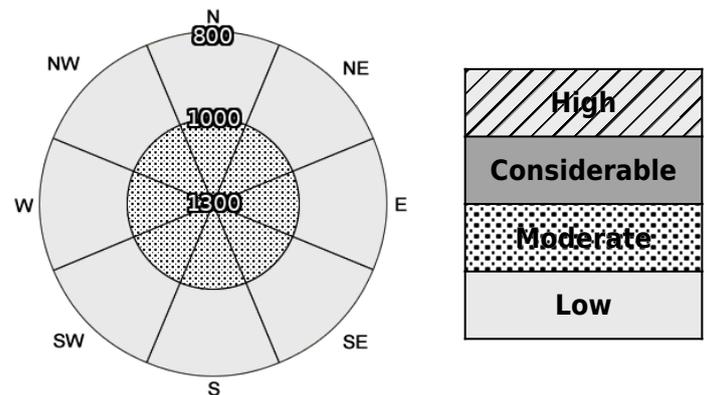

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack will become increasing soft and moist. Overnight instabilities will be present on all steep aspects above 1000 metres. Areas most affected will be where deeper accumulations remain, especially around gully tops and coire rims. During the day the snowpack will become more stable as the precipitation clears. Cornices will be prone to collapse. The avalanche hazard will be Moderate.

Forecast Weather Influences

Overnight precipitation will be rain at all levels with wet snow during the early hours on the highest summits. Light North-Easterly winds will back to the North-West. During the day precipitation will clear, becoming dry during the afternoon. The North-West winds will increase moderate to strong. The freezing level is expected to remain above the summits.

Comments

The wet and thawing conditions present a significant and unpredictable risk of cornice collapse, rock and ice fall.
