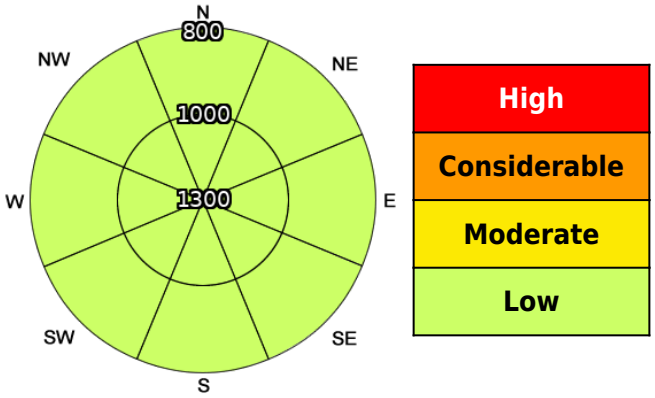
Forecast Snow Stability & Avalanche Hazard

There will be a dusting of new snow above 1000 metres. As it turns cooler the old snowpack will become firm and remain well bonded and stable at all altitudes. The most widespread accumulations will be above 1000 metres around coire back walls and high plateau areas. The avalanche hazard will be Low.



Forecast Weather Influences

Light rain overnight on strong Southerly winds. During the day winds will be South-Westerly, rain will turn to occasional light snowfall above 1000 metres as the freezing level falls to summit levels during the afternoon.

Comments

This is the last Avalanche Report for this season. We would like to thank everyone their support. Have a great summer.
