

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Saturday 17/12/2022****Avalanche Problems****Wind Slab****Cornices****Forecast Snow Stability & Avalanche Hazard**

Instabilities will persist in existing areas of windslab, affecting steep North-West through North-East to South-East aspects above 800 metres. Accumulations of fresh unstable windslab will develop on steep wind sheltered terrain, North to East aspects above 750 metres. Most affected will be gully exits, ridge flanks and scarp slopes. Cornices will remain fragile. Elsewhere, snow cover will be stable. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

Light scattered snow showers will continue throughout the forecast period. Winds will be fresh to strong, generally South-Westerly. The freezing level will hover around 400 metres.

Comments

Expect challenging trail breaking through deep soft snow. Becoming milder, but remaining very cold at summit levels.
