Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 19/12/2022 TO 18:00HRS Tue 20/12/2022

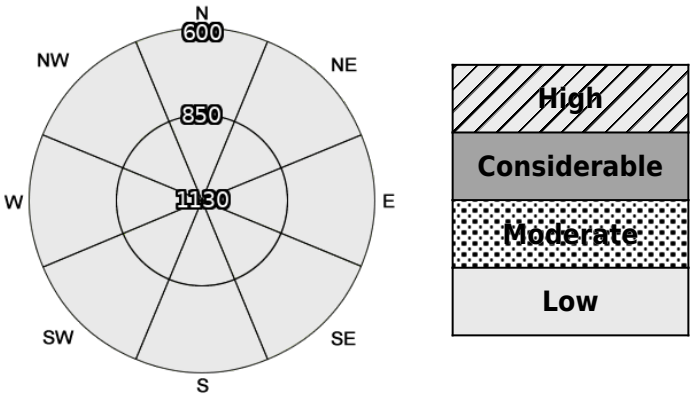
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 20/12/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The remaining snowpack will re-freeze at higher elevations overnight above 800 metres. New snow amounts are unlikely to be significant, although where they do achieve depth, above 850 metres new snow instabilities will exist. These in steepest gully flanks and exits on North to Easterly aspects. Small, isolated ribbons of old snow exist down to 500 metres. Good stability on all wind scoured aspects. The avalanche hazard will be Low



Forecast Weather Influences

The freezing level will lower again to around 800 metres overnight, with any clearing rain turning to snow above this elevation. Some light scattered snow showers will affect the area during the day. The winds will remain strong South-South-Westerly throughout.
