

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 23/12/2022

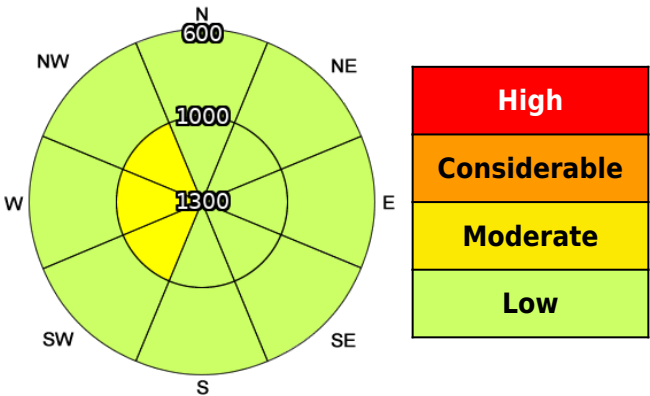

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Drifting snow at higher elevations. Accumulations of unstable windslab will develop in wind sheltered locations. Areas most affected will be around the tops of gullies and corrie rims on South-West to North-West aspects above 1000 metres. Elsewhere the snowpack will continue to consolidate and be generally well bonded and stable throughout. The avalanche hazard will be Moderate.

Forecast Weather Influences

Light snowfall through the night on light to moderate East-North-East winds. Friday is expected to be dry with moderate to strong East-South-East winds. The freezing level will fall overnight, and remain at 600 metres for the rest of the forecast period.

Comments

Soft snow in some areas, especially through boulder fields where there is potential to sink to the top of your leg when off the beaten track.
