

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Saturday 24/12/2022

Avalanche Problems

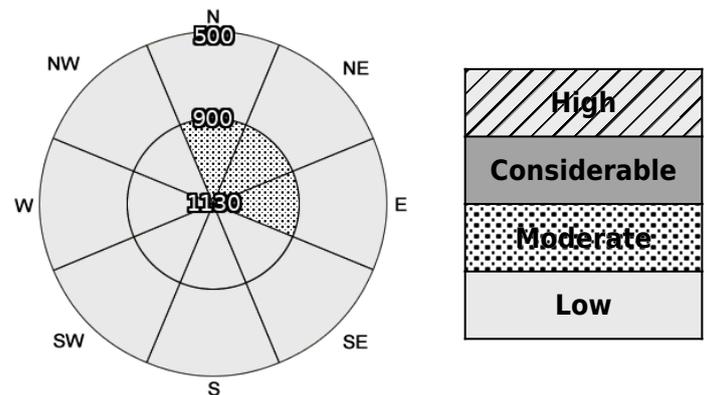

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Accumulations of unstable windslab will become more widespread. Areas most affected will be gully exits, coire rims, flanks and crag aprons on South-West through West to North aspects above 950 metres. Localised windslab will develop on steep banks below 950 metres and in other areas due to cross loading. Cornices will build and become fragile in the above mentioned areas. Elsewhere the old snowpack will be firm and stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

Snow showers throughout the forecast period, these could be heavy at times. Strong to gale force East-South-Easterly winds will veer to become South-South-Easterly in direction. The 600 metre freezing level will steadily rise to 1100 metres by the end of the afternoon.

Comments

Currently, snow amounts are uncertain, but expect unstable windslab to become more widespread in the above mentioned areas.
