

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 24/12/2022

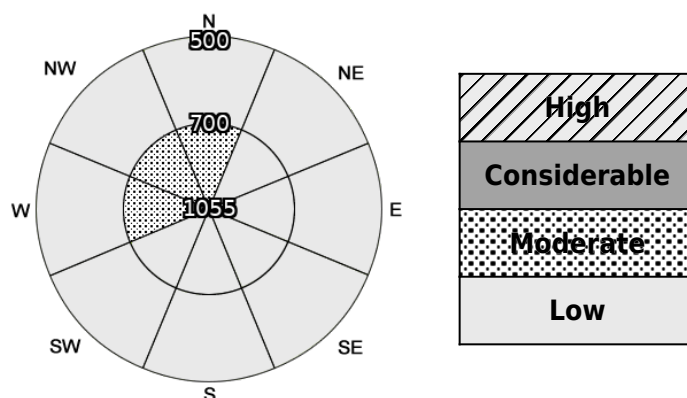

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will gradually build in wind sheltered areas on West, North-West and North aspects. Areas mainly affected will be gully tops and corrie rims above 700 metres. The old snowpack will remain stable and well bonded. The avalanche hazard will be Moderate.

Forecast Weather Influences

Very strong Easterly winds will ease slightly and veer to become South-Easterly. Moderate snowfall is expected from the early hours. The freezing level will rise from 500 to 1100 metres during the day.

Comments

Very little snow remaining below 600 metres. Very firm snow above this height.
