Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sat 24/12/2022 TO 18:00HRS Sun 25/12/2022

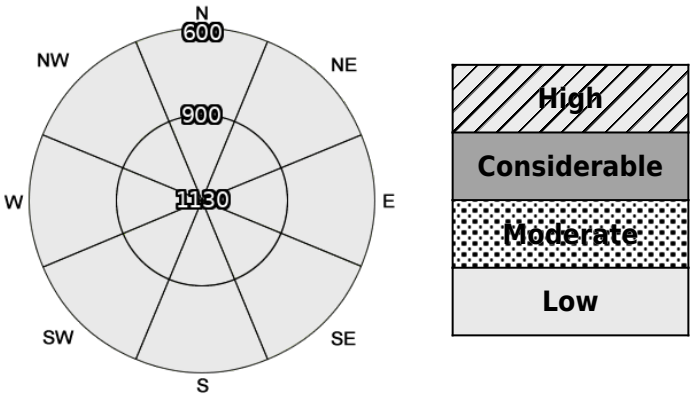
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 25/12/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Overnight and during the early morning some new deposits of moist windslab will form mainly on North to East aspects above 1050 metres. From mid morning windslab will be deposited in wind sheltered areas to increasing lower levels, mainly on North to East aspects. Accumulations are not expected to be extensive or gain significant depth. The old snowpack will be generally stable. The avalanche hazard will be Low.



Forecast Weather Influences

Strong winds will initially be Southerly, gradually veering Westerly through the period and easing moderate to strong during the morning. Overnight and during the early morning showers will fall as snow above around 1050 metres, then to increasingly lower levels as the freezing level drops to around 600 metres.
