

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 29/12/2022

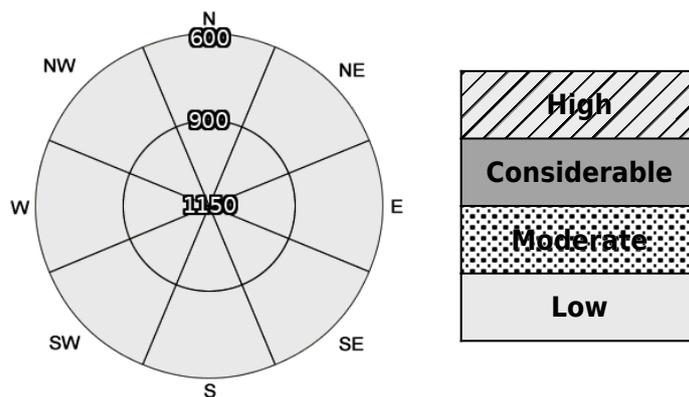

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The snow will be generally well bonded and stable. Deeper accumulations will be encountered in wind sheltered locations on West through North to North-East aspects above 900 metres. Later in the day, shallow windslab will form on North to East aspects above 700 metres but amounts are not expected to be significant. The avalanche hazard will be Low.

Forecast Weather Influences

Light rain at all levels during the early evening, followed by light snowfall above 600 metres through the day. Moderate South-Westerly winds during the morning, veering Westerly, as they increase to become strong. Freezing level briefly above all summits during the early evening, falling fairly quickly to settle at 700 metres for the rest of the period.

Comments

Another melt-freeze cycle likely to produce firm and icy conditions underfoot.
