Avalanche Hazard Forecast

Issued 31/12/2022

FOR PERIOD 18:00HRS Sat 31/12/2022 TO 18:00HRS Sun 01/01/2023

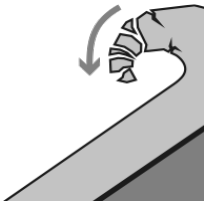

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 01/01/2023

Avalanche Problems

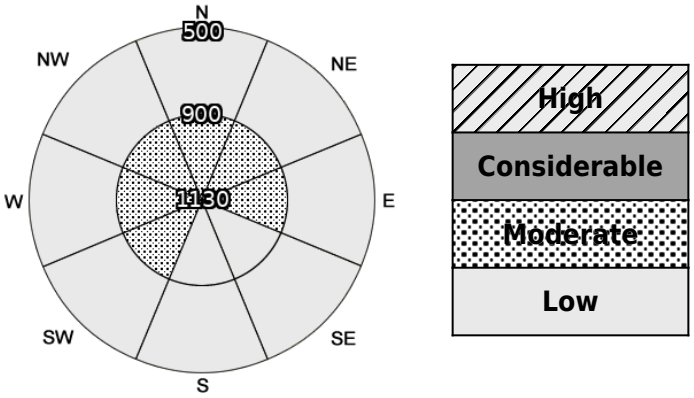

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

New unstable windslab will be deposited in wind sheltered areas, mainly on South-West to North-West aspects above 900 metres. Accumulations gaining depth are not expected to be extensive but where they do, will be weak. Instabilities will persist in the recently deposited windslab present mainly on North to East aspects above 900 metres. The old snowpack will be refrozen and generally stable. The avalanche hazard will be Moderate.

Forecast Weather Influences

Moderate Easterly winds overnight will gradually ease to light and back, becoming Northerly during the day. The freezing level will rise from 400 metres overnight to be around 500 metres during the day. Overnight it will be dry, then light snowfall is expected through the day.
