

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 02/01/2023

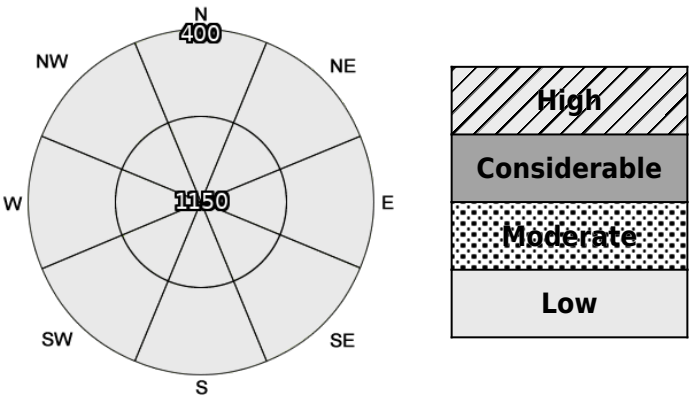

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The snowpack will remain generally stable. Some redistribution of the soft surface layer is expected to create localised areas of unstable windslab mainly on North and North-East aspects above 800 metres. These are not expected to be extensive. The avalanche hazard will be Low.

Forecast Weather Influences

Dry overnight with the possibility of light snow showers in the afternoon. Moderate South-West winds overnight will back, becoming Southerly during the day. The freezing level will rise to around 600 metres through the day.

Comments

After fairly good weather again on Monday, unsettled conditions are expected on Tuesday and Wednesday.
