

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Monday 02/01/2023

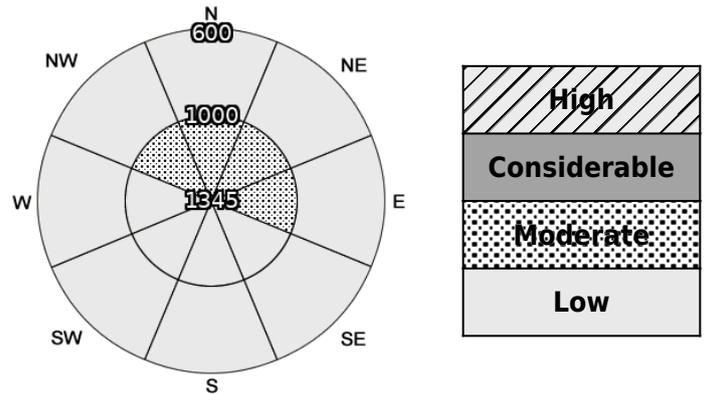

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Wind redistribution of the soft surface layers of the snowpack will deposit poorly bonded layers of soft windslab onto North-West through North to East aspects above 1000 metres through the day. These areas are not expected to be particularly extensive or deep, the tops of slopes and gullies being most affected. Fragile cornices will also begin to develop. On other aspects, and at lower altitudes, the snowpack will be hard, icy and stable. The avalanche hazard will be Moderate.

Forecast Weather Influences

It will be generally dry although light snow showers are possible late afternoon. The freezing level will be around 600 metres. Moderate winds from the South-West will back to become Southerly.

Comments

Happy New Year from the SAIS Lochaber team.
