

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 03/01/2023

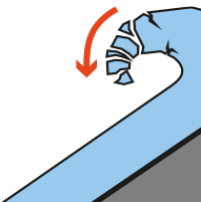

Avalanche Problems

Wind Slab

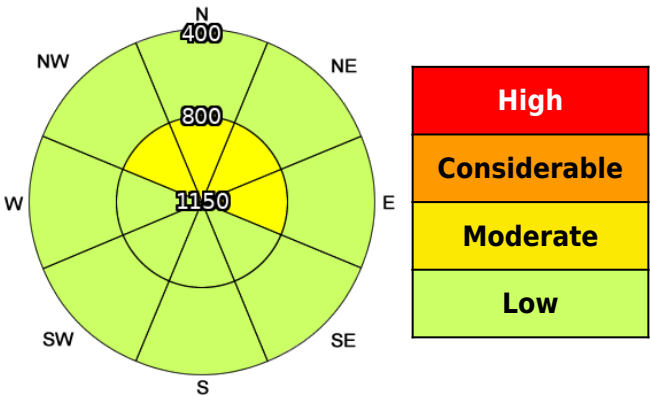

Wet Snow

Cornices

Forecast Snow Stability & Avalanche Hazard

Localised areas of unstable windslab will be present with greatest accumulations on North-West through North to East aspects above 800 metres. There will be a period of poor stability during the day as the temperature rises and snow turns to rain. In other locations the snowpack will remain generally stable. Cornices will be prone to collapse. The avalanche hazard will be Moderate.

Forecast Weather Influences

Occasional snow showers in the evening will die out to give a dry cold night. Further snow showers starting before dawn will turn to rain at all levels in the afternoon. Fresh Southerly winds will back to become South-Easterly in direction and reach gale force overnight, easing during the day. The freezing level will rise above the summits during the day.

Comments

Heavy rain forecast for Tuesday evening.
