

## THE AVALANCHE HAZARD WILL BE CONSIDERABLE

### Avalanche Hazard Forecast for Tuesday 10/01/2023

#### Avalanche Problems

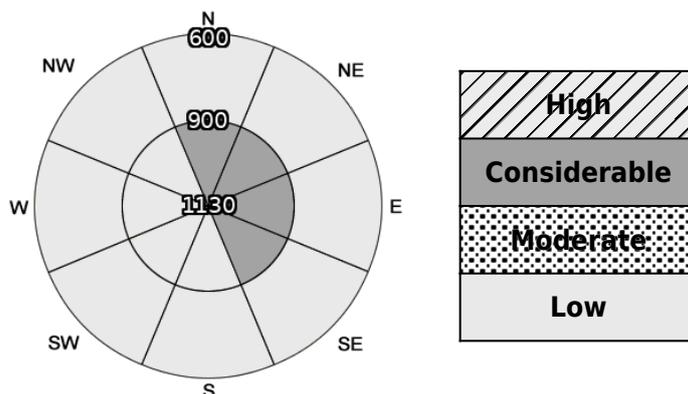

Wet Snow

Cornices

#### Forecast Snow Stability & Avalanche Hazard

Wet snow instability on steep, wind sheltered North to South-East aspects above 900m with the onset of rain from midday. Recently formed cornices over these aspects will weaken during the mild, wet conditions. Better stability at lower altitudes and on less steep ground. The avalanche hazard will be Considerable

#### Forecast Weather Influences

Overnight snow showers then dry until the onset of rain at all levels from midday. Cold but quickly much milder from noon. Strong-West-South-West winds becoming Southerly then gale force South-Easterly later.

#### Comments

Declining stability from midday onwards.
