

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Friday 13/01/2023

Avalanche Problems

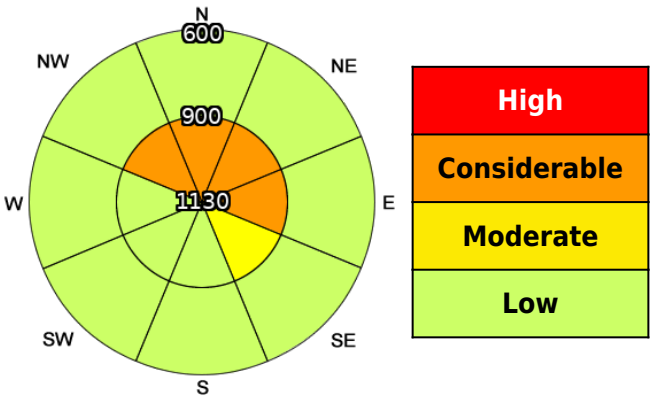

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Fresh unstable windslab will continue to develop. Greatest accumulations will be on North-West through North to East aspects above 900 metres. Cornices, mainly to be found above these aspects, will be fragile. Windward slopes will generally be scoured and stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

Showers, falling as snow above around 700 metres become less frequent as the period progresses. Very strong Southerly winds initially, ease and veer to become fresh North-Westerlies overnight and then back to the West during the day. Freezing level around 900 metres overnight and 750 metres during the day.

Comments

A bit less windy for the next few days and slowly getting colder.
