

**THE AVALANCHE HAZARD WILL BE CONSIDERABLE**

**Avalanche Hazard Forecast for Saturday 14/01/2023**

**Avalanche Problems**

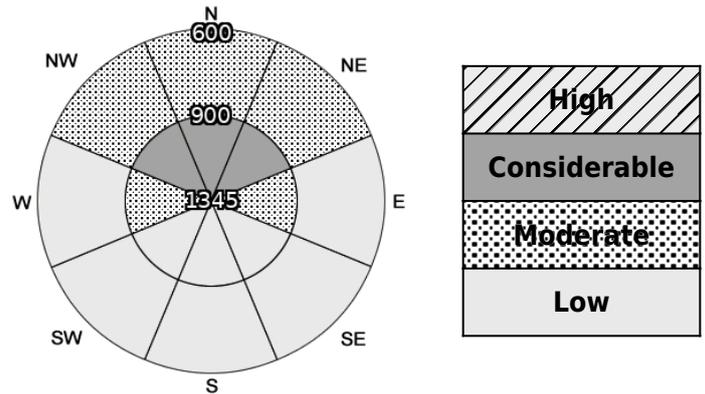

Wind Slab

Cornices

**Forecast Snow Stability & Avalanche Hazard**

Overnight, fresh windslab will be deposited onto, and add depth too, the existing moderately bonded windslab. This will mainly affect wind sheltered locations, gully tops and scarp slopes above 900 metres on North-West to North-East aspects. Unstable cornices will continue to form above these aspects. Wind scoured slopes will remain firm, stable, and become more icy. The avalanche hazard will be Considerable.

**Forecast Weather Influences**

Overnight there will be snow showers above 700 metres. During the day these showers will be lighter, but above around 500 metres. Overnight freezing level around 750 metres lowering to 600 metres or so during the day. Strong overnight South-Easterly winds will moderate during the day, veering South-South-Westerly.

**Comments**

Poor visibility on the summits.
