

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 15/01/2023

Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Significant areas of unstable windslab will remain in wind-sheltered locations such as gullies and coire rims above 900 metres. Most affected will be North-West through North to East aspects. Some substantial and fragile cornices will remain on these aspects. On wind exposed locations on other aspects the snowpack will tend to be firm, hard and stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

After some light overnight snow a generally dry day is expected. North-Westerly winds will ease. It will turn colder with the freezing level dropping from around 600 metres to around 200 metres.

Comments

Cold conditions over the next few days likely to maintain instabilities.
