

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 15/01/2023

Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Localised areas of moderately bonded windslab will build in steep wind sheltered terrain, mainly East to South aspects above 650 metres. New cornice growth expected above same aspects. Instabilities will remain in residual windslab, steep North-East to East aspects above 750 metres, otherwise, the general snowpack will have good stability and will be very firm where the old snow is exposed. The avalanche hazard will be Moderate.

Forecast Weather Influences

Snow showers, merging into longer periods of snow is expected overnight, becoming scattered snow showers through the day. Strong North to North-Westerly winds, easing through the day. Freezing level 600 metres overnight, lowering to 100 metres by the end of the forecast period.

Comments

Bitterly cold at summit levels tomorrow with -8C forecast by afternoon. It will remain cold into next week with snow showers.
