

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 18/01/2023

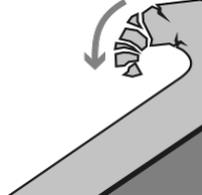

Avalanche Problems

Wind Slab

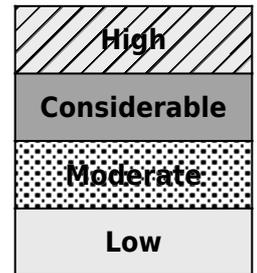

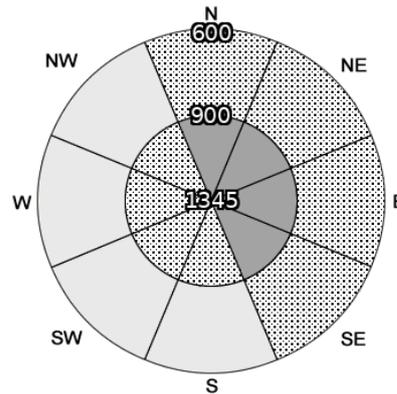

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Areas of moderate and poorly bonded windslab will persist in wind-sheltered locations such as gullies on mainly North through East to South-East aspects above 900 metres. Some large cornices will remain above these aspects. Additionally, redistributed windslab as well as fresh deposits will affect Southerly aspects during the day. However, these fresh areas of windslab are not expected to be extensive or deep. The avalanche hazard will be Considerable.

Forecast Weather Influences

Cold with strong North to North-Westerly winds. Freezing level around 200 metres. Some snow showers though the period.

Comments

Remaining cold with little change in snowpack expected through the week. Possible change to mild, wet and windy conditions for next weekend.
