Avalanche Hazard Forecast

Issued 17/01/2023

FOR PERIOD 18:00HRS Tue 17/01/2023 TO 18:00HRS Wed 18/01/2023

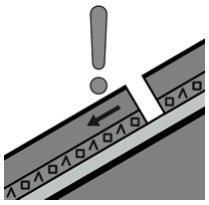

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 18/01/2023

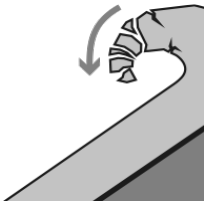

Avalanche Problems

Wind Slab

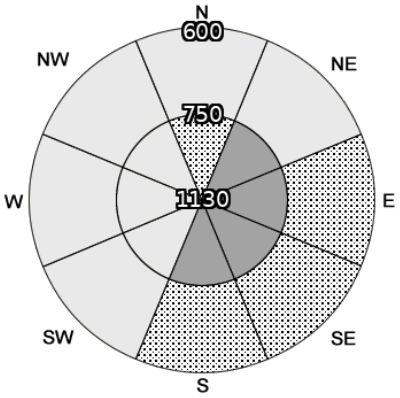

Persistent Weak Layers

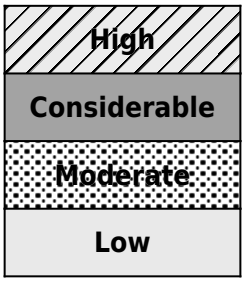

Cornices

Forecast Snow Stability & Avalanche Hazard

Additional weak windslab will build on East to South aspects above 750m; some North and North-East aspects also affected. Many of these snowpack locations are underlain by cold induced weak layers. Fragile cornices will be present over steeper lee slopes. Better stability on ridge crests and wind exposed locations scoured down to a firm crust. The avalanche hazard will be Considerable

Forecast Weather Influences

Cold with snow showers throughout. Stronger North West winds.
