

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 26/01/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to freeze and consolidate in the colder conditions. The greatest deposits remain on North to East aspects above 800 metres. Stability will generally good throughout. The avalanche hazard will be Low.

Forecast Weather Influences

It will be dry overnight and through the day. The freezing level will be around 700 metres. Moderate wind from the North will ease through the period.

Comments

Snowpack surface turning very hard and icy. Significant slide hazard. I will certainly be taking my ice axe and crampons tomorrow.
