Avalanche Hazard Forecast

Issued 27/01/2023

FOR PERIOD 18:00HRS Fri 27/01/2023 TO 18:00HRS Sat 28/01/2023

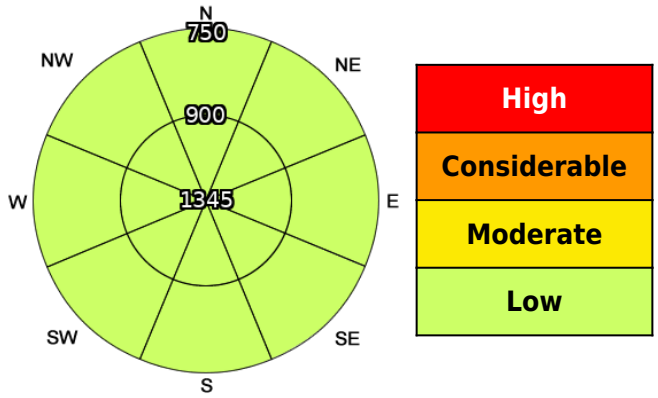

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 28/01/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The existing snowpack will be firm, icy and stable. Extensive snowfields will remain on North to East aspects above 900 metres. Any overnight summit snow will be just a slight dusting and insignificant. The avalanche hazard will be Low.

Forecast Weather Influences

There will be a little light rain and summit snow overnight. During the day it will be cloudy, and mainly dry with moderate winds generally from the South-West. After very briefly rising above the summits overnight, the freezing level will fall to around 700 metres and remain there throughout the day.

Comments

After a the freezing level rising overnight, the existing snowpack will be cool and remain frozen and icy. Serious slip hazard and runout potential will remain on steeper snow slopes.
