

THE AVALANCHE HAZARD WILL BE LOW**Avalanche Hazard Forecast for Thursday 02/02/2023****Avalanche Problems****Wet Snow****Cornices****Forecast Snow Stability & Avalanche Hazard**

The snowpack will thaw at all levels, becoming wet throughout, and will diminish, particularly at lower to mid elevations. Some early wet snow instability possible in isolated pockets of recent windslab, notably where it gains depth. The firm older snowpack will have good stability with some surface softening expected. Cornices will become fragile. The avalanche hazard will be Low.

**Forecast Weather Influences**

It will be a day of persistent heavy rain at all levels, preceded by a little summit snow Wednesday evening. There will be a strengthening South-Westerly airflow, becoming strong and gusty by the afternoon. The freezing level will rise and remain well above the summits during this evening.

Comments

Mild, windy and very wet tomorrow. A poor day on the hill.
