

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Thursday 02/02/2023

Avalanche Problems

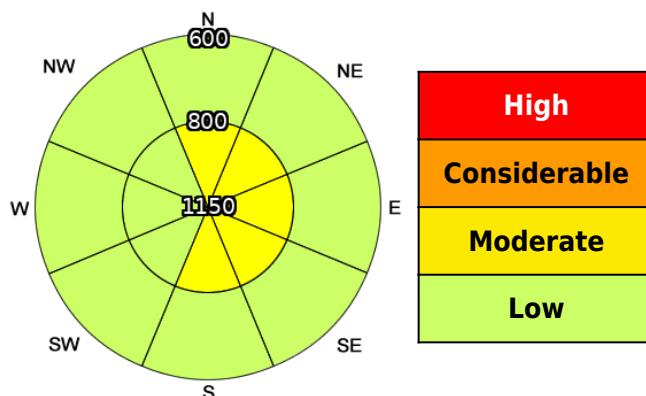

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Recent windslab will start to consolidate with a good deal of the snow becoming well bonded and stable. Deeper accumulations, in steeper wind sheltered locations on North through East to South aspects above 800 metres will contain moderately bonded deposits. Recently formed small cornices will remain fragile. Westerly facing slopes and exposed locations will be scoured and stable. The avalanche hazard will be Moderate.

Forecast Weather Influences

Light rain or drizzle expected during the early morning and late afternoon. Moderate Westerly winds overnight, increasing to become strong West-South-Westerly during the afternoon. Freezing level rising over the summits during the night, giving steady thaw conditions throughout the period.

Comments

Stripped and loaded - a real mix of firm snow-ice and deep drifts in close proximity.
