

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 03/02/2023

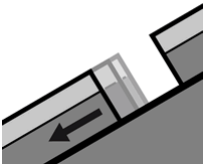

Avalanche Problems

Wet Snow

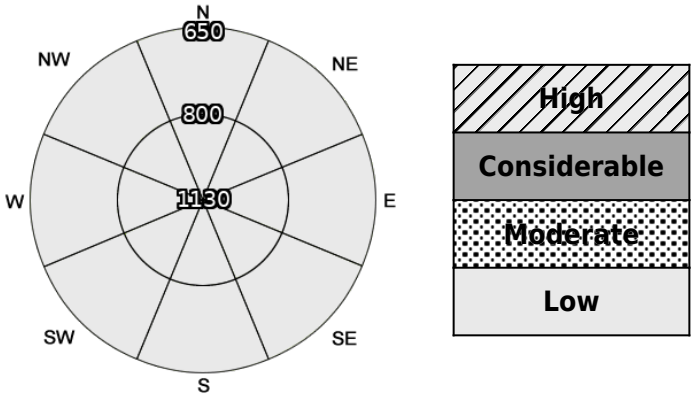

Cornices

Gliding Snow

Forecast Snow Stability & Avalanche Hazard

The snowpack, greatest accumulations of which lie on North through East to South-East aspects above 800 metres, will continue to thaw and consolidate at all levels. Stability will generally be good. Any remaining cornices will be prone to collapse. Full depth avalanches will be possible on very steep North-East to East facing slopes and crags. The avalanche hazard will be Low.

Forecast Weather Influences

After rain at all levels during the evening, the rest of the night and early morning is expected to be dry. Rain at all levels from late morning. The freezing level will be above all summits apart from a brief period overnight when it will drop to around 900 metres. Winds will be strong mainly West-South-Westerly.
