

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 04/02/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The existing stable spring snowpack will freeze and further consolidate during the afternoon. Through the afternoon areas of fresh of windslab will be deposited on wind-sheltered locations on North-East to South-East aspects above 900 metres. However, these areas are expected to be shallow and localised with the tops of slopes and gullies being most affected. The avalanche hazard will be Low

Forecast Weather Influences

It will remain dry and mild overnight and through the morning. From around midday the freezing level will drop initially rapidly, but then more slowly to around 600 metres by the end of the afternoon. Strong South-Westerly winds will back to become Westerly.

Comments

Significant slip hazard as snowpack refreezes during Saturday.
