

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 04/02/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

There will be little change to current conditions with the patchy snow cover remaining firm and well bonded. Greatest amounts of snow will be found in North to East facing corries above 900 metres, patchy elsewhere. The avalanche hazard will be Low.

Forecast Weather Influences

Initially the freezing level will be over the summits but it will gradually drop to around 800 metres or so late afternoon. Any precipitation will be light with a dusting of snow late afternoon. There will be a strong breeze throughout, South-South-West during the day, veering to the West-North-West at the end of this period.

Comments

Very firm and icy in some locations.
