

## THE AVALANCHE HAZARD WILL BE LOW

### Avalanche Hazard Forecast for Sunday 05/02/2023

#### Avalanche Problems

#### Forecast Snow Stability & Avalanche Hazard

Yesterday's deposits of new windslab, lying mainly on North-East to South-East aspects above 850 metres, will remain. Accumulations having gained depth will not be extensive. The surface of the old snowpack, greatest accumulations of which lie on North through East to South-East aspects above 800 metres, will refreeze in the colder conditions and will generally be stable. The avalanche hazard will be Low.

#### Forecast Weather Influences

Strong West-North-Westerly winds will ease overnight and back Southerly before strengthening to strong during the afternoon. It is expected to be dry throughout the period. After an overnight frost it will be a cloudy day.

#### Comments

Surface of the refrozen old snowpack will be hard and icy.
