

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 07/02/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The old snowpack will be stable and well bonded throughout and will firm up as the freezing level lowers during the day. Any new snow will be shallow and easily avoidable and will mainly be found on North and East aspects above 900 metres. The greatest areas of old snow will be found on North to East aspects above 800 metres. The avalanche hazard will be Low.

Forecast Weather Influences

Strong South-Westerly winds will lessen in strength becoming light during the day. Initially, the freezing level will be at 1400 metres, before lowering to 900 metres. Light rain, with snow above 900 metres, will fall overnight and early Tuesday before leaving a dry day.

Comments

No snow below 800 metres. Snowpack remains hard and icy.
