

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 09/02/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The remaining patchy snow will be firm, well bonded and stable. Shallow accumulations of fresh snow will be present in wind sheltered locations on North-East to South-East aspects but deposits will not achieve any significant depth. The avalanche hazard will be Low.

Forecast Weather Influences

Very light snowfall during the evening followed by a mostly dry day. Strong, generally Westerly winds throughout. 500 metre freezing level overnight, rising steadily to 800 metres by the afternoon.

Comments

Old snow firming up again in the cooler temperatures.
