Avalanche Hazard Forecast

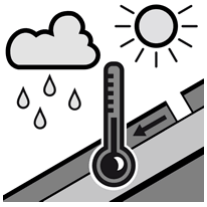
Issued 10/02/2023

FOR PERIOD 18:00HRS Fri 10/02/2023 TO 18:00HRS Sat 11/02/2023

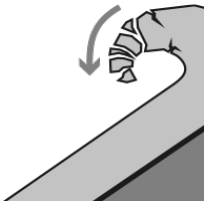
THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 11/02/2023

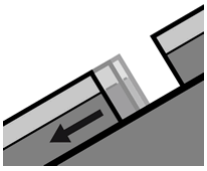
Avalanche Problems



Wet Snow



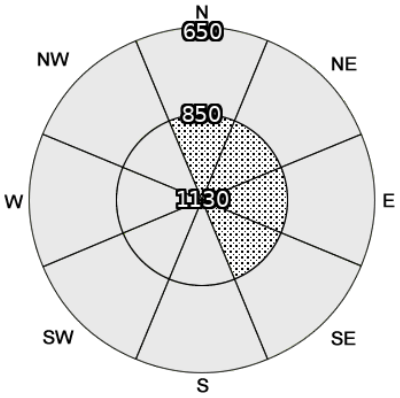
Cornices

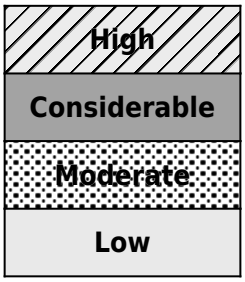


Gliding Snow

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to slowly consolidate although some wet snow instabilities will persist mainly on North through East to South-East aspects above 850 meters. Areas most affected will be steep terrain. On these aspects remaining cornices will be prone to collapse and there will be the potential for full depth avalanches from very steep slopes. Improved stability and continued depletion of snowpack at lower elevations. The avalanche hazard will be Moderate





Forecast Weather Influences

Winds will be mainly gale force from the West at first then back to become strong West-South-West. Precipitation will fall as rain through the evening, becoming dry pre dawn. Freezing level will be above the summits.

Comments

Improving stability as the snowpack becomes colder over the next few days.
