

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 16/02/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

There will be an insignificant dusting of fresh snow above 950 metres. The old snow will be firm, well bonded and stable throughout. Very limited snow will be encountered below 900 metres. Patchy cover above this altitude with deepest accumulations being found on North to East aspects. The avalanche hazard will be Low.

Forecast Weather Influences

Very light snowfall this evening above 950 metres, then dry weather throughout the rest of the period. Winds will be moderate in strength and variable around the South-Westerly quadrant. Freezing level will be 800 metres overnight, gradually rising to 1200 metres by the end of the afternoon.

Comments

Old snow patches remain firm. Unsettled weather expected for the next 48 hour period.
