

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 16/02/2023

Avalanche Problems

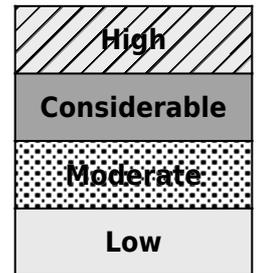

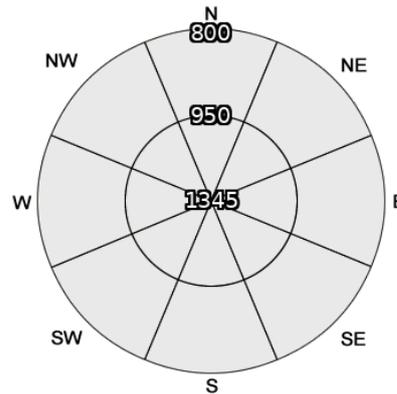

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Fresh unstable windslab will be deposited in wind sheltered areas onto recently deposited windslab, mainly on North-West through North to East aspects above 950 metres. Accumulations gaining depth are not expected to be extensive. The old snowpack will be generally stable and its surface refrozen. Newly formed cornices will be fragile. The avalanche hazard will be Low.

Forecast Weather Influences

Very strong South-Westerly winds will ease overnight and during the day will be moderate mainly South-South-Westerly. The freezing level will be 800 metres overnight, gradually rising to around 1000 metres during the day. After some snow showers above 800 metres during the early evening the period is expected to be dry.
