

**THE AVALANCHE HAZARD WILL BE LOW****Avalanche Hazard Forecast for Tuesday 21/02/2023****Avalanche Problems****Forecast Snow Stability & Avalanche Hazard**

The old and increasingly patchy snowpack will continue to thaw and be generally well bonded with good stability. The greatest accumulations will remain on North to East aspects above 800 metres. The avalanche hazard will be Low.

**Forecast Weather Influences**

It will be wet with rain showers at all levels, throughout the forecast period. South-Westerly winds will be fresh during the evening. Overnight, they will steadily gain in strength becoming gale force by mid morning. The freezing level will be above the summits.

**Comments**

Gale force winds with rain showers continuing, will feel cold on the tops, due to the wind chill.
