

THE AVALANCHE HAZARD WILL BE LOW**Avalanche Hazard Forecast for Monday 06/03/2023****Avalanche Problems****Persistent Weak Layers****Gliding Snow****Forecast Snow Stability & Avalanche Hazard**

The patchy old snow on North to East aspects above 800 metres will remain well bonded. New snow will begin to accumulate, primarily on bare ground on South-East to South-West aspects above 600 metres. Small pockets of moderately bonded windslab will form in sheltered locations. These will be limited in extent and where any accumulations overlie the remaining old snow any patches will be avoidable. The avalanche hazard will be Low.

**Forecast Weather Influences**

There will be snow showers, occasionally heavy throughout the forecast period. Overnight the snow will be above 600 metres, during the day snow will fall to road level in Torridon. Moderate North-Westerly initially will veer Northerly during the night becoming very strong and remaining so during daylight hours. The freezing level will be around 600 metres overnight, dropping to 200 metres by dawn.

Comments

Snow showers throughout Monday on very strong Northerly winds.
