

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 07/03/2023

Avalanche Problems

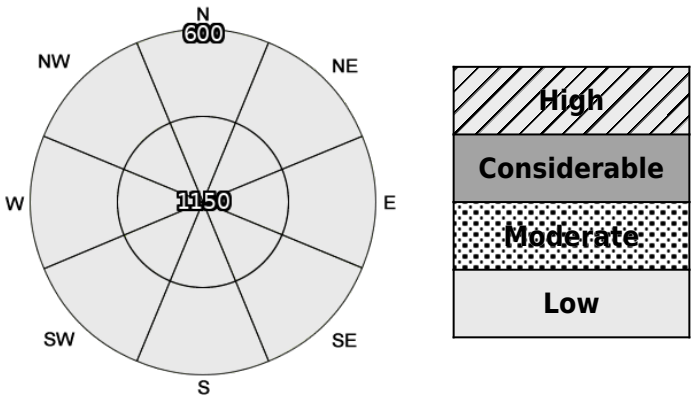

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

The old snowpack which mainly exists in the higher North and East facing corries will generally remain well bonded and stable with a firm surface. Snow showers will form isolated areas of unstable windslab, mainly around the tops of summit gullies and steep, scarp slopes with an East to South-East aspect. With only very light new snow expected these areas should be shallow and generally avoidable. Fragile cornices may exist in some of these areas. The avalanche hazard will be Low.

Forecast Weather Influences

It will remain cold, freezing at all levels throughout the period. Isolated and very light snow showers will continue to affect the area. Winds will be fresh Northerly overnight, North-Westerly by day.

Comments

Remaining cold with very light snow showers. Isolated areas of windslab and fresh cornices will require caution.
