

### THE AVALANCHE HAZARD WILL BE MODERATE

#### Avalanche Hazard Forecast for Wednesday 08/03/2023

##### Avalanche Problems

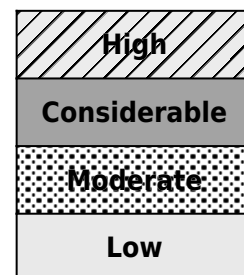

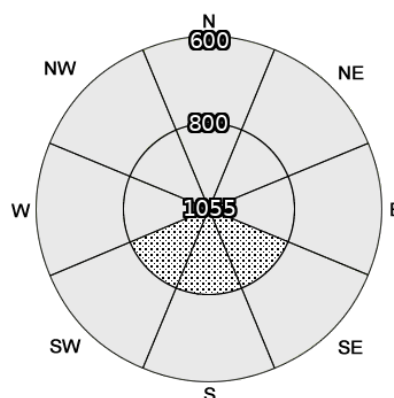

Wind Slab

Cornices

##### Forecast Snow Stability & Avalanche Hazard

Fresh unconsolidated snow will be present on all aspects to all levels, much of it lying on bare ground. Where it has gained greatest accumulations, moderately bonded windslab will be present primarily on South-East to South-West aspects above 800 metres. Areas most affected will be coire rims, gully tops and other steep wind sheltered locations. Cornices will be fragile. The avalanche hazard will be Moderate.

##### Forecast Weather Influences

There will be early evening scattered snow showers on moderate Northerly winds which will ease to leave a dry and sunny day. Winds will veer to the North-East and become light with the freezing level rising to 200 metres around noon.

##### Comments

The North West remains under a blanket of snow. Wednesday will be calm, clear and sunny - don't forget the sun cream and shades.
