

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 08/03/2023

Avalanche Problems

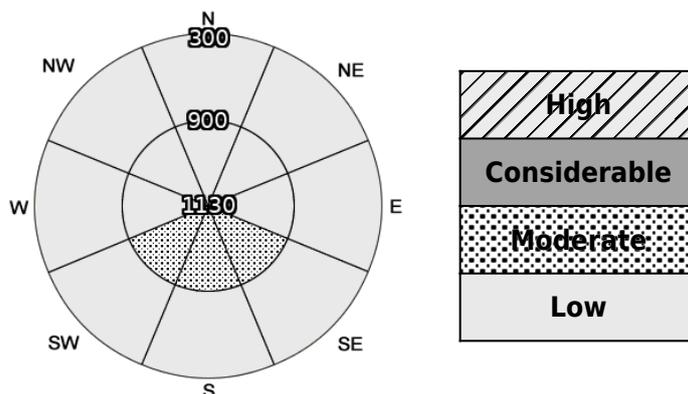

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Localised areas of unstable windslab will persist in wind sheltered locations mainly on South-East to South-West aspects above 900 metres with some fragile cornices above these aspects. The patchy older snowpack will remain firm and the thin covering of fresh snow on other aspects and at lower elevations will be generally stable. The avalanche hazard will be Moderate.

Forecast Weather Influences

After moderate North-North-Westerly winds and light snow showers in the early evening it will be dry, cold and clear with light East-North-Easterly winds.

Comments

Forecast to remain cold for the rest of the week.
