

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 10/03/2023

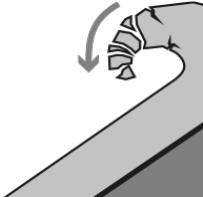

Avalanche Problems

Wind Slab

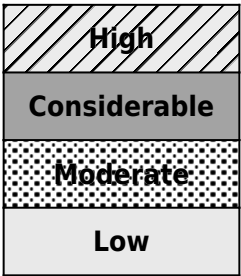

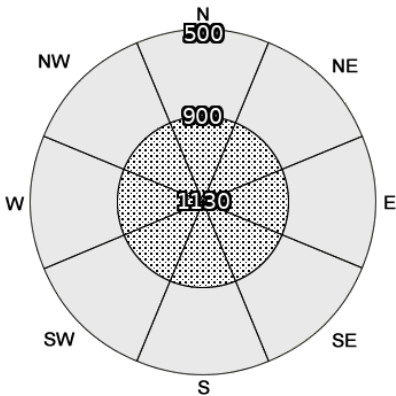

Persistent Weak Layers

Cornices

Forecast Snow Stability & Avalanche Hazard

Overnight localised areas of unstable windslab will develop mainly on South to West aspects above 900 metres. During the day windslab will form on East to South aspects above 900 metres. This will mainly affect areas such as steep corrie headwalls, gully tops and the leeward side of ridge crests. Existing weaknesses on Northerly aspects will persist. In addition, continued cold temperatures will further develop weaknesses within the snowpack on all aspects. The avalanche hazard will be Moderate.

Forecast Weather Influences

Strong East-North-East winds backing and easing through North to West-North-Westerlies by Friday morning. Remaining dry and very cold with the ground frozen down to glen level.

Comments

Alpine conditions continue through Friday with very cold, dry weather.
