

### THE AVALANCHE HAZARD WILL BE MODERATE

#### Avalanche Hazard Forecast for Saturday 11/03/2023

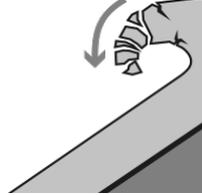

##### Avalanche Problems

Wind Slab

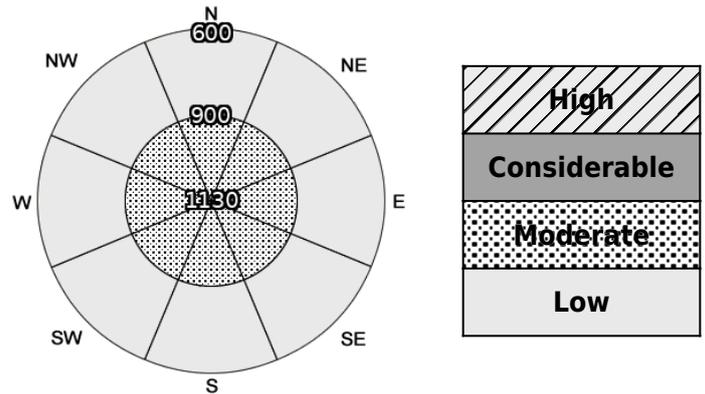

Persistent Weak Layers

Cornices

##### Forecast Snow Stability & Avalanche Hazard

Overnight localised areas of unstable windslab will develop mainly on East through South to South-West aspects above 900 meters. During the day, windslab will form on West to North aspects above 900 meters. North-East aspects will also be affected. This will mainly affect areas such as steep corrie headwalls and gully tops. In addition, continued cold temperatures will further develop weaknesses within the snowpack on all aspects above 900m. The avalanche hazard will be Moderate.

##### Forecast Weather Influences

Overnight moderate Northerly winds will veer through East and increase to strong South-Easterlies by morning. A predominately dry day is expected, with the freezing level at 200 meters or less.

##### Comments

Fresh snow fall expected Saturday night through Sunday and into Monday.
