

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 11/03/2023

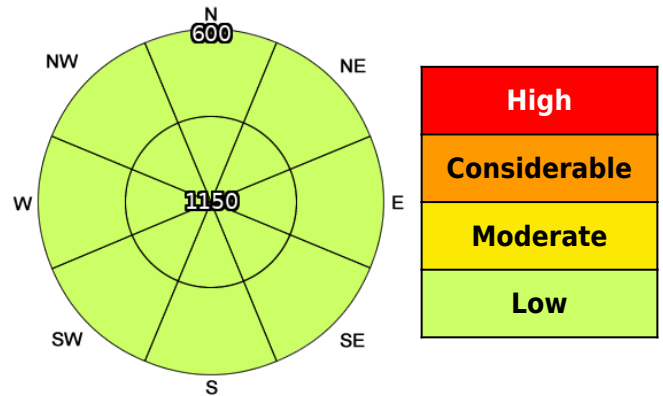

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The older snowpack, which exists mainly in North and East facing corries above 900 metres, will remain well bonded, firm and stable. Very isolated and shallow accumulations of unstable windslab will persist on South-West and West aspects and develop in the afternoon on North-West aspects above 800 metres. These will be generally avoidable. The avalanche hazard will be Low.

Forecast Weather Influences

It will remain dry and very cold. Light Westerly winds will veer Easterly overnight and then veer further to South-Easterly and increase to moderate in the afternoon.

Comments

Older snowpack underneath the soft layer remains very firm and icy, often with steep runouts on to rocks below. Any slip is likely to have serious consequences.
