Avalanche Hazard Forecast

Issued 18/03/2023

FOR PERIOD 18:00HRS Sat 18/03/2023 TO 18:00HRS Sun 19/03/2023

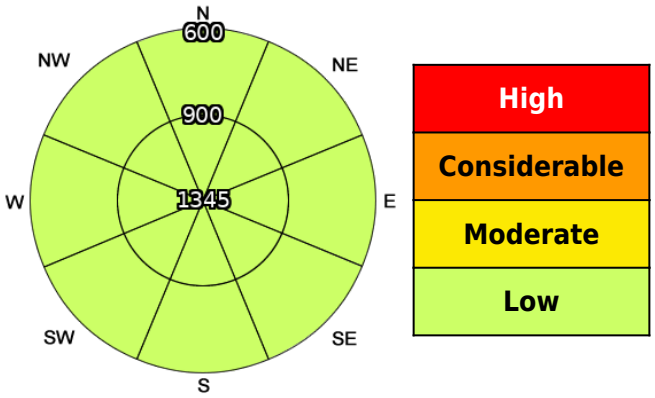
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 19/03/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The surface of the old snowpack will refreeze in the colder conditions, and will generally be stable on all aspects and at all levels. During the later afternoon there may be some deposits of new snow, though accumulations gaining depth are not expected to be extensive. The avalanche hazard will be Low.



Forecast Weather Influences

Overnight winds will be moderate West-South-Westerly veering North-Westerly; during the day light North-West backing Southerly. This evening the freezing level will lower to around 800 metres, where it will stay during the rest of the period. After a little light snow this evening the period will be mainly dry, with some light snow above 600 metres possible during the later afternoon.
