Southern Cairngorms

Issued 21/03/2023

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Tue 21/03/2023 TO 18:00HRS Wed 22/03/2023

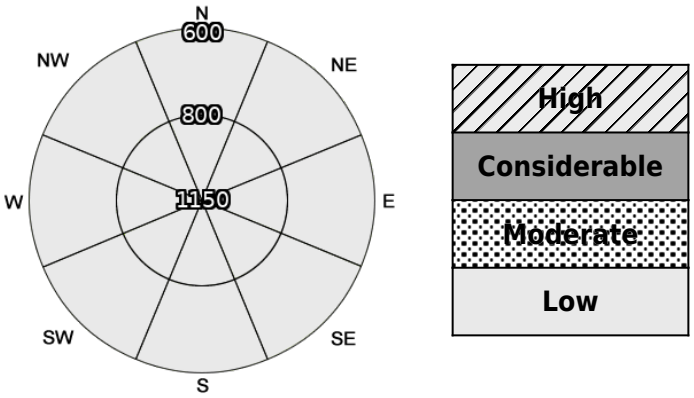

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 22/03/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The wet patchy snowpack will become firmer during the morning. New snowfall will be limited, with some isolated and mostly avoidable accumulations of shallow windslab forming on North to East aspects above 800 metres. Slopes exposed to the strong winds will be scoured and very firm. The avalanche hazard will be Low.

Forecast Weather Influences

Precipitation falling as rain overnight, will turn to snow around dawn as the freezing level lowers to around 800 metres. Southerly winds overnight will strengthen to become gale force South-Westerlies by early morning.

Comments

Forecast to be a stormy day on Wednesday.
