

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 23/03/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The remaining patchy snow will be well bonded and stable with firm surface layers during the morning, softening slightly at lower elevations later on. New accumulations of snow will be encountered in wind sheltered locations on North-West through North to East aspects above 900 metres. These fresh deposits will be shallow and mostly avoidable. The avalanche hazard will be Low.

Forecast Weather Influences

Light precipitation overnight, falling as snow above 900 metres, will be followed by a dry day. Moderate South-South-Westerly winds. Freezing level fluctuating from 1000 metres overnight, lowering to 750 metres by sunrise, then rising once again to 1100 metres during the afternoon.

Comments

Remaining unsettled with low pressure dominating during the next 48 hour period. Colder weather arriving over the weekend.
