

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Wed 29/03/2023 TO 18:00HRS Thu 30/03/2023

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

It will remain wet with the freezing level around 1350 metres. Light to moderate Southerly winds over the summits.

Forecast Snow Stability and Avalanche Hazard

Some fresh wet snow is expected over the summit of Ben Nevis, although accumulations are not expected to be significant. Elsewhere, the remaining old snow will continue to thaw and consolidate. Snowpack stability will remain generally good. The avalanche hazard will be Low.

Observed Avalanche Hazard - Wed 29/03/2023

Observed Weather Influences

It has been a damp and sometimes wet day with the freezing level well above the summits.

Observed Snow Stability and Avalanche Hazard

The snowpack is thawing and consolidating at all levels. Snowpack stability is generally good. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions	A damp day with the cloud base mainly around 950m.
Comments	Remaining mainly wet with easing winds
