

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 02/04/2023

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The limited snowpack which mainly exists in the higher Northerly and Easterly corries will be firm on the highest slopes initially, softening through the day. There will be generally good stability throughout. Isolated pockets of new snow will be avoidable. The avalanche hazard will be Low.

Forecast Weather Influences

It will be mainly dry but a trace of new snow will fall on the higher tops overnight. Amounts of new snow are not expected to be significant. Winds will be light to moderate, generally Southerly. The freezing level initially will be around 1150 metres rising to 1300 metres through the course of the day.

Comments

Outlook for next 48 hours. Remaining dry with freezing levels 700-1000 metres.
