

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 05/04/2023

Avalanche Problems

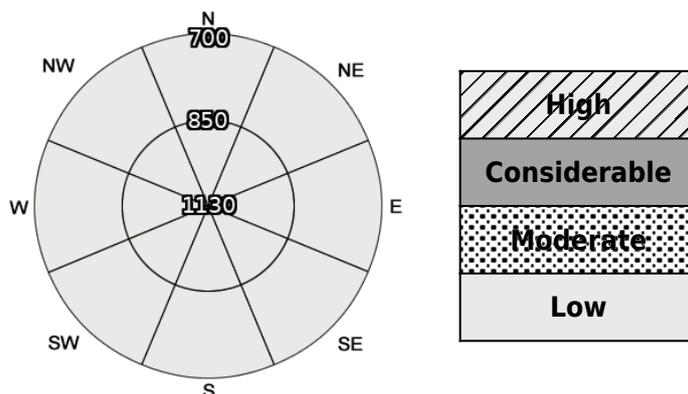

Cornices

Gliding Snow

Forecast Snow Stability & Avalanche Hazard

The patchy snowpack will be generally stable throughout. It will thaw and deplete further in the mild, wet conditions, with its surface softening. There is a limited threat of full-depth avalanches from very steep benches and slopes in Coire Ardair. Remaining cornices above North to East aspects will be prone to collapse. The avalanche hazard will be Low.

Forecast Weather Influences

The freezing level will remain above all summits. Persistent rain at all levels is expected overnight and throughout the day. Winds will be Southerly, strong overnight easing to moderate during the day.

Comments

Rock and ice fall are hazards in the mild wet conditions. Main accumulations of snow lie on North to East aspects above 850m, and on high plateaux.
