

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Monday 10/04/2023

Avalanche Problems

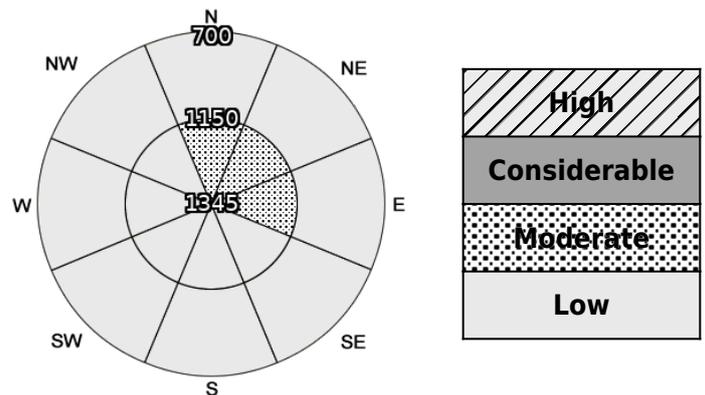

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Localised areas of fresh unstable windslab will develop in wind sheltered locations, mainly on North to East aspects above 1000 metres. Fragile cornices will develop above these aspects. The older snowpack will refreeze in the colder temperatures and be firm and stable. The avalanche hazard will be Moderate.

Forecast Weather Influences

Gale force South-South-Easterly winds eased to become fresh to strong and slowly veer to the West through the period. Showers, heaviest in the evening when they will only fall as snow above around 1300 metres, will fall as snow down to around 800 metres during the day. The freezing level will drop from just above the summits to around 1000 metres.

Comments

An unsettled few days ahead with fresh snow at higher elevations.
